Sample Important Questions with Model Answers

Q1. Explain the mechanism of nucleophilic substitution in haloalkanes ($\text{S}_\text{N}2$ mechanism). Answer: The $\text{S}_\text{N}2$ mechanism involves a single concerted step where the nucleophile attacks the electrophilic carbon from the opposite side of the leaving group, resulting in inversion of configuration. The process is bimolecular, involving both the substrate and the nucleophile in the rate-determining step. The mechanism proceeds through a transition state where bonds to both the leaving group and nucleophile are partially formed. The rate law is second order: $\text{rate} = k[\text{haloalkane}][\text{nucleophile}]$.

Q2. Write the thermodynamic relation connecting ΔG , ΔH , and ΔS . Derive the expression for spontaneity. Answer: The fundamental thermodynamic relation is: $\Delta G = \Delta H - T\Delta S$. If $\Delta G < 0$, the process is spontaneous. If $\Delta G > 0$, the process is non-spontaneous. If $\Delta G = 0$, the system is at equilibrium. Derivation involves Gibbs free energy and the Second Law of Thermodynamics, showing the conditions under which reactions proceed spontaneously.

Tips for Effective Revision Focus on repeatedly asked questions. Make concise notes of important formulas, reactions, and concepts. Practice numerical problems regularly. Use diagrams to visualize complex mechanisms. Solve previous years' question papers to familiarize yourself with exam

patterns. Conclusion Mastering inter 2nd year chemistry important questions is a crucial step towards excelling in your exams.
