Microeconomics This section deals with individual economic agents such as consumers, producers, and markets. **Demand and Supply:** Understanding the laws of demand and supply, determinants, and market equilibrium. **Price Elasticity:** Calculations and implications of price elasticity of demand and supply. **Market Structures:** Characteristics of perfect competition, monopoly, monopolistic competition, and oligopoly. **Consumer Behavior:** Utility maximization, budget constraints, and consumer choice theory. **Macroeconomics** This section covers the broader economic environment and national economic policies. **Economic Growth and Development:** Measures of growth, factors influencing development, and challenges faced. **Inflation and Unemployment:** Causes, effects, and policy responses. **Fiscal and Monetary Policy:** Government revenue, expenditure, and central bank functions. **Balance of Payments:** Components such as exports, imports, and exchange rates. **Economic Data Interpretation** Students are expected to analyze graphs, tables, and case studies related to economic indicators and policies. **Sample Questions from the November 2013 Examination and Their Solutions** Understanding the types of questions asked and reviewing their solutions is crucial. Below are examples of typical questions from the November 2013 memorandum, along with explanations.

Question 1: Explain the concept of price elasticity of demand and how it impacts business pricing strategies. **Answer:** The price elasticity of demand measures how sensitive the quantity demanded of a good is to changes in its price. It is calculated as the percentage change in quantity demanded divided by the percentage change in price. If demand is elastic (elasticity > 1), a small price change leads to a significant change in quantity demanded, prompting businesses to be cautious with price increases. Conversely, if demand is inelastic (elasticity < 1), firms can increase prices without losing much in sales, often to maximize revenue. Understanding elasticity helps businesses set optimal prices and forecast sales responses to price adjustments.

Question 2: Using the data below, calculate the price elasticity of demand:

Price	Quantity Demanded
R10	100 units
R12	80 units

[Solution:] First, calculate the percentage change in price and quantity demanded: $\text{Percentage change in price} = [(12 - 10) / 10] \times 100 = 20\%$ $\text{Percentage change in quantity demanded} = [(80 - 100) / 100] \times 100 = -20\%$ Now, elasticity = $(\% \text{ change in quantity demanded}) / (\% \text{ change in price}) = -20\% / 20\% = -1$ The absolute value is 1, indicating unit elastic demand at this price point.

Utilizing the Memorandum Effectively for Exam Preparation The November 2013 Grade 12 memorandum is not just a guide to correct answers; it is a learning tool. Here are some strategies for maximizing its usefulness:

- 1. Understand the Marking Scheme** Pay attention to the allocated marks for each question to understand the level of detail expected. Review sample solutions to grasp the depth of explanations needed.
- 2. Practice with Past Questions** Use the memorandum in conjunction with previous exam papers to simulate real exam conditions. Practice answering questions without looking at solutions, then compare your responses to the memorandum.
- 3. Focus on Explanation**

and Application Memoranda often emphasize not just correct answers but also the reasoning behind them. Practice explaining economic concepts in your own words.

4. Clarify Difficult Concepts

Use the memorandum to identify areas where your understanding is weak. Seek additional resources or teachers' guidance to clarify complex topics.
