- Simulate Fire Conditions:** Use smoke pens, aerosol sprays, or test magnets to activate smoke detectors, heat sensors, or manual pull stations. For smoke detectors, gently introduce smoke or aerosol to trigger detection.
- Observe**

Alarm Activation: Confirm that the control panel registers the detection and that alarms are sounding and visible (strobes, LEDs).

Check Notification Appliances: Verify that horns, bells, strobes, and other alert devices activate as intended.

Record Results: Document which detectors and notification devices responded correctly and note any failures or anomalies.

Proceed to Next Zones: Continue systematically through all detection zones, repeating the process.

Complete the Test: Once all areas have been tested, deactivate the walk test mode from the control panel.

Special Considerations

Ensure that testing methods do not cause unnecessary panic or disruption. Use non-corrosive, approved testing aerosols or smoke devices. Avoid testing during peak occupancy times if possible. Maintain safety by informing occupants when testing is underway.

Post-Test Procedures

Analyzing and Documenting Results

After completing the walk test, review the recorded data to identify:
